Tom/Rodger,

There is a hole in the 2014 NEI v2 data for Idaho on Residential Wood Combustion. For SCCs 2104008230, 8310, and 8330 the NEI only reports PM-FIL and PM-CON. No other pollutants. So the pollutant totals for RWC will be low. I have notified EPA of this and they are looking into it. I don't know that they have fixed it yet. My EIS support request remains open so I don't think they have.

I ran the 2014 RWC Tool to get the rest of the data for my use. The tool does not include PM-FIL or PM-CON, just PM-PRI. I have provided the updated 2014 RWC data and you can filter for what is missing... This would be before any EPA augmentation. It does affect more states than Idaho but I am not sure of the extent of the data missing... Might be something to double check on the other states....

I am looking at the rest of the data and will let you know if I find any other anomalies... Let me know if you have any questions.

Gary
