RP

Good morning Rodger,

I had responded to Tom on June 14 that Montana had no comments thus far regarding the inventory. We had taken the "Option 1" approach and reviewed the sectors at a high level, making sure to focus in on the sectors in our state that represent 80% of the emissions.

To review the sectors, we downloaded all the data categories from the 2014NEI v2 and, using the SCCDownload-2018 workbook, we joined the data category summaries by SCC so as to have the Sector/Tier breakdown. We identified our sectors that compromise 80% of total emissions and have the NEI data pulled into an excel workbook by SCC so we can create pivot tables or conduct any additional analysis necessary on those sectors.

After speaking with Tom back in mid-June, he alerted us that we should be reviewing the data for oil & gas basins with inventories supported by IWDW projects. That is what we are currently working on. I will hopefully be able to provide comments by the call next week. So far, I have found a few errors in the Big Horn basin workbook.

Hope that helps!

--Rhonda

Subject: RHPWG Emissions Inventory and Modeling Protocol (RHPWG EI & MP) Subcommittee. Request for comments on 2014 NEIv2 emissions.

Hello RHPWG participants,

This is reminder that we are asking states to review and provide comments on EPA's 2014 NEIv2 for major source sectors in their state. Please see the RHPWG wiki <http://views.cira.colostate.edu/wiki/wiki/9191> for a memo that describes the Round 1 comment process.

To date we have not received comments from Montana. The next RHPWG EI & MP

Subcommittee call is on July 26 and we would like to receive comments before the call.

We appreciate your contributions to the review.

Regards,
Rodger Ames
