BH

Hi Tom and Rodger,

We have reviewed the 2014 NEIv2 for Nevada, primarily for the point source emissions. The major point sources appear to have been included correctly. We do not see any issues with the data and the range of emissions appears to look reasonable. We do not have any changes at this time.

Washoe County did submit local MOVES model input data, however during their review, they did not see that the input data was submitted, only the emission output of the MOVES model run.

Please feel free to contact us if you have any questions.

Thanks
Brenda
