1. EXECUTIVE SUMMARY

Canadian and Mexican area source emissions are processed in the othar sector using an inventory provided by Environment and Climate Change Canada (ECCC) for year 2015, and a projection of Mexico emissions from 2008 to 2016. This sector includes nonroad mobile and area source stationary (except Canada ag) emissions in Canada and Mexico. Temporal profiles and spatial allocation are provided by ECCC. Base year inventories were processed with the Sparse Matrix Operating Kernel Emissions (SMOKE) modeling system version 4.6. SMOKE

creates emissions in a format that can be input into air quality models. National and state/province-level emission summaries for key pollutants are provided.

2. INTRODUCTION

This document details the approach and data sources to be used for developing 2016 emissions for the Canadian and Mexican area source (othar, or other area) sector. This sector includes all area source emissions which are not included in the onroad_can, onroad_mex, or othafdust sector. It also does not include Canadian agricultural emissions, which are point sources in this platform.

Canadian emissions for this sector are provided by ECCC for the year 2015, and are used directly (i.e. without projecting) for 2016 modeling. In Canada, the othar sector includes three transportation-related inventories (nonroad, rail, and CMV/marine) and a stationary area source inventory. These inventories do not include fugitive dust or agricultural emissions.

In Mexico, the othar sector includes a nonroad inventory and an area source inventory. The othar sector includes all CMV Category C1/C2 emissions within Canada and Canadian federal waters, but does not include CMV C3 emissions; those were converted to point format and moved to the othpt sector. It does not include any Mexican CMV emissions. The othpt sector includes a small Mexican CMV inventory that covers points only. Underway emissions in Mexican federal waters are in the cmv_c3 sector as part of the non-US ECA-IMO-based inventory.

A list of all SCCs in the othar sector is provided in Appendix A.

3. INVENTORY DEVELOPMENT METHODS

Canada

ECCC provided the Canadian area source emissions inventory for 2015 in a format that is close to, but not exactly, FF10. Some columns that are unused by SMOKE contained metadata that needed to be reformatted or moved prior to importing the data into EPA's Emissions Modeling Framework (EMF), due to restrictions on variables types imposed by the FF10 format (e.g. character values in numeric fields). Emissions for year 2015 were used directly for year 2016 modeling in beta platform. The nonroad Canadian inventory is a monthly inventory, and the marine, rail, and other area inventories are annual.

The Canada othar inventories are all province-level, except for the nonroad inventory in Quebec, Ontario, and British Columbia. In Ontario, nonroad emissions are placed in one of four regions; British Columbia and Quebec have two regions each. Each region has a separate set of spatial surrogates.

Detailed documentation of the ECCC emissions inventories for 2015 is provided in Documentation for SMOKE-Ready 2015 Air Pollutant Emission Inventory (APEI) Package version 1 (ECCC, 2018).¹

The other sector includes four Canadian inventories: three transportation inventories (nonroad, rail, and marine), and the other area inventory.

In the Canada marine inventory, C3 emissions were removed, converted to point format, and moved to the other sector. C1 and C2 CMV emissions remain in the other sector.

Mexico

The other sector includes two Mexico inventories, an area inventory and a nonroad inventory. These Mexico inventories are based on projections of a 2008 inventory. These inventories were originally projected to years 2014 and 2018 (ERG, 2014²; ERG, 2017³). For 2016 beta platform, emissions values from those two years were averaged (interpolated) to 2016. These inventories do not include commercial marine vessel (CMV) emissions in Mexico.

4. ANCILLARY DATA

Spatial Allocation

Spatial allocation of other emissions to the national 36km and 12km domains used for air quality modeling is accomplished using spatial surrogates. Spatial surrogates map county polygons to the uniformly spaced grid cells of a modeling domain.

For development of spatial surrogates in Canada, ECCC did not provide spatial surrogates directly, but instead provided shapefiles and specification files for running the Surrogate Tool. Using those inputs, we ran the Surrogate Tool to create Canadian spatial surrogates for the 36US3 and 12US1 grids.

ECCC provided a cross-reference for mapping SCCs to their surrogates. Canadian nonroad sources use surrogates which include sub-province FIPS codes in Quebec, Ontario, and British Columbia consistent with the nonroad inventory.

¹ ECCC 2018. Documentation for SMOKE-Ready 2015 Air Pollutant Emission Inventory (APEI) Package version 1. Available from ftp://newftp.epa.gov/air/emismod/2016/beta/reports/A18031_2015_Canadian_CAC_EmissionsInventoryPackage_version1.pdf

² ERG 2014. Develop Mexico Future Year Emissions. Available from ftp://newftp.epa.gov/air/emismod/2016/beta/reports/Mexico_Emissions_WA%204-09_final_report_121814.pdf

³ ERG 2017. Development of Mexico Emissions Inventories for the 2014 Modeling Platform. Available from ftp://newftp.epa.gov/air/emismod/2016/beta/reports/EPA%205-18%20Report_Clean%20Final_01042017.pdf

In Mexico, spatial surrogates for the 36US3 and 12US1 domains are unchanged from the 2011 emissions modeling platform, except for a new population surrogate based on 2015 population that was developed in 2017.

Reports summarizing total emissions by spatial surrogate at the state and county level are included in the emissions modeling workgroup reports package. A national summary of emissions by spatial surrogate is in Table 1. Note that Canadian surrogate codes are not consistent with US surrogate codes.

Table 1. Other emissions by spatial surrogate (36US3 domain)

Temporal Allocation

Other sector inventories are temporalized to hourly using month-of-year, day-of-week, and hour-of-day temporal profiles. The Canadian nonroad inventory is monthly and does not have month-of-year temporalization applied. ECCC provided temporal profiles and an SCC cross-reference. The Canadian temporal profiles used in beta platform differ from those provided by ECCC in the following ways:

- ECCC provided temporal profiles and cross-references in a format used by older versions of SMOKE (version 3.5 and earlier). We converted their profiles and cross-reference to the format used by SMOKE 4.6.
- ECCC's cross-reference included an overall default profile (SCC=000000000) to be used when specific SCCs were not included in the cross-reference. As a standard practice, we do not include an overall default profile in our temporal cross-reference, so we removed that assignment and filled in missing SCCs, with profiles assigned to those for similar SCCs as needed.

Mexico sources use the same temporal profiles as Canada.

Reports summarizing total emissions according to the monthly, day-of-week, and hour-of-day temporal profile assignments are included in the emissions modeling workgroup reports package at the state and county level. A national summary of emissions by temporal profile is in Table 2.

Chemical Speciation

The other sector includes speciation of PM2.5 and VOC emissions using the same profiles and SCC cross-references as in the US. No HAPs are included in the inventory, and so there is no HAP integration in this sector. In Canada, nonroad VOC emissions are specified by mode (exhaust and evaporative). Mexico nonroad emissions are not mode-specific.

New for beta platform, a GSPRO_COMBO is used to specify a mix of E0 and E10 fuels in Canada, for use in speciating Canadian nonroad gasoline emissions. ECCC provided percentages of ethanol use by province, and these were converted into E0 and E10 split. For example, Alberta has 4.91% ethanol in its fuel, so we applied a mix of 49.1% E10 profiles (4.91% times 10, since E10 is 10% ethanol), and 50.9% E0 fuel. Ethanol splits for all provinces in Canada are listed in Table 1. The Canadian onroad inventory includes four distinct county codes in Ontario, allowing for application of separate E0/E10 in Southern Ontario versus Northern Ontario.

In Mexico, the GSPRO_COMBO serves a different purpose as applied to nonroad gasoline speciation. First, Mexico gasoline is assumed to have no ethanol content for the purposes of

speciation; i.e. Mexico gasoline VOC is speciated using only profiles for E0 fuel. Second, Mexico nonroad VOC emissions are not mode-specific in the inventory, and so the GSPRO_COMBO is used to split VOC speciation between the exhaust E0 profile and the evaporative E0 profile – specifically, a 60% exhaust / 40% evaporative split.

Reports summarizing total PM2.5 and VOC emissions according to speciation profile are included in the emissions modeling workgroup reports package at the state and county level.

Table 2: Ethanol percentages by volume by Canadian province

Province	Ethanol % by volume (E10 = 10%)
Alberta	4.91%
British Columbia	5.57%
Manitoba	9.12%
New Brunswick	4.75%
Newfoundland & Labrador	0.00%
Nova Scotia	0.00%
NW Territories	0.00%
Nunavut	0.00%
Ontario (Northern)	0.00%
Ontario (Southern)	7.93%
Prince Edward Island	0.00%
Québec	3.36%
Saskatchewan	7.73%
Yukon	0.00%

5. EMISSIONS PROJECTION METHODS

Canadian stationary sources

ECCC provided area stationary source inventories for the years 2023 and 2028. Unlike in their 2015 inventories in which dust and agricultural emissions were grouped into separate files, these sources were not provided as separate inventories for the future years. Therefore, dust emissions from the othafdust and othptdust sectors, and ag emissions from the othpt sector, needed to be removed from the future year area source inventory to prevent a double count.

PM emissions for all SCCs in the othafdust inventory (see othafdust sector document) were moved to a separate inventory. Then, most emissions from agricultural SCCs (2801- and 2805-)

were removed, since the NH₃ and VOC emissions overlap the point format ag inventories which are part of the othpt sector, and the PM emissions were either already moved to the othaf dust sector, overlap the othpt dust sector, or were not present in 2015 (see note about fertilizer below). One ag SCC was partially retained in the area source inventory according to both the SCC and ECCC's 5-digit "sub-class codes". SCC 2805000000 for sub-class code 80104, which represents agricultural fuel combustion, was not removed from the area source inventory, since these emissions were part of the othar sector in 2016ff and are not included in any of the other inventories.

PM emissions from fertilizer were not present in any 2015 ECCC inventory, but did appear in the future year area source inventory. According to ECCC, this was an error in 2015, and the 2015 inventories should have included approximately 7,000 tons per year of PM emissions from fertilizer. Fertilizer PM emissions were also excluded from future year modeling to preserve consistency between modeling years.

ECCC provided an additional stationary area source inventory for 2023 and 2028 representing electric power generation (EPG). According to ECCC, this inventory's emissions were covered by the point source EPG inventory in 2015 and does not double count the 2023 and 2028 point source inventories, and it is appropriate to include this new area source EPG inventory in the othar sector.

Canadian mobile sources

For mobile nonroad sources, including rail and CMV, future year inventories from ECCC were not available in time for inclusion in beta platform. Instead, ECCC provided data from which future year projections of these inventories could be derived. This data, provided by ECCC in a file called "Projected_CAN2015_2023_2028.xlsx", includes emissions data for 2015, 2023, and 2028 by pollutant, province, ECCC sub-class code, and other source categories. This data was used to calculate 2015-to-2023 and 2015-to-2028 projection factors, which were then applied to the 2015 mobile source inventories to create projections of Canadian mobile source emissions for 2023 and 2028.

Projection factors were applied by province, sub-class code, and pollutant. The ECCC projection workbook included additional source information which provides more detail than do the sub-class codes, but that more detailed information could not be easily mapped to the inventory, and the level of detail offered by the sub-class codes was considered sufficient for projection purposes. For the nonroad inventory, the sub-class code is analogous to the SCC7 level in U.S. inventories. For example, there are separate sub-class codes for fuels (e.g. 2-stroke gasoline, diesel, LPG) and category (e.g. construction, lawn and garden) but not for individual vehicle types within each category (e.g. snowmobiles, tractors). For CMV and rail, the sub-class code is

closer to full SCC, because there are separate codes for port and underway emissions, and for freight and passenger rail emissions.

Mexico

The other sector includes two Mexico inventories, an area inventory and a nonroad inventory. Similar to 2016, the future year Mexico inventories are based on projections of a 2008 inventory, but are based on different interpolations. In addition to the 2014 and 2018 projections that were the basis for 2016, these inventories were also originally projected to years 2025 and 2030. For beta platform future year projections, emissions values from 2018 and 2025 were interpolated to 2023, and emissions values from 2025 and 2030 were interpolated to 2028. These emissions are unchanged from the 2011 platform, except that CMV emissions were removed from the nonroad inventory to prevent a double count with the other sector, since the other sector did not include a Mexico CMV inventory in the 2011 platform.

6. EMISSIONS PROCESSING REQUIREMENTS

Other sector emissions were processed for air quality modeling using the Sparse Matrix Operator Kernel Emissions (SMOKE⁴) modeling system. The Canada nonroad inventory is monthly, and so Smkinven was run 12 times, each with a different SMKINVEN_MONTH setting. Then when Temporal is run, Canada nonroad sources use monthly emissions directly, while the rest of the sector uses monthly temporal profiles. Emissions are processed for seven representative days per month (one for each day of the week). Holiday-specific temporalization is not performed in Canada or Mexico. This is a 2-D sector in which all emissions are output to a single layer gridded emissions file.

7. EMISSIONS SUMMARIES

National, province and state totals by pollutant for the beta platform cases are provided here, and some example plots. Plots and maps are available online through the LADCO website⁵ and the Intermountain West Data Warehouse⁶.

The case descriptions are as follows:

2011en, 2023en, 2028el = Final 2011, 2023, and 2028 cases from the 2011v6.3 platform

2014fd = 2014NEIv2 and 2014 NATA

2016fe = 2016 alpha platform (grown from 2014NEIv2)

Appendix A: SCCs in the other sector

SCC descriptions are not available for all SCCs in Canada and Mexico.

SCC	Tier 1 description	Tier 2 description	Tier 3 description	Tier 4 description
30501049	Industrial Processes	Mineral Products	Coal Mining, Cleaning, and Material Handling	Wind Erosion: Exposed Areas
2102004000	Stationary Source Fuel Combustion	Industrial	Distillate Oil	Total: Boilers and IC Engines
2102007000	Stationary Source Fuel Combustion	Industrial	Liquified Petroleum Gas (LPG)	Total: All Boiler Types
2103006000	Stationary Source Fuel Combustion	Commercial/Institutional	Natural Gas	Total: Boilers and IC Engines
2103007000	Stationary Source Fuel Combustion	Commercial/Institutional	Liquified Petroleum Gas (LPG)	Total: All Combustor Types
2104006000	Stationary Source Fuel Combustion	Residential	Natural Gas	Total: All Combustor Types
2104007000	Stationary Source Fuel Combustion	Residential	Liquified Petroleum Gas (LPG)	Total: All Combustor Types
2104008001	Stationary Source Fuel Combustion	Residential	Wood	Fireplace: general
2104008002	Stationary Source Fuel Combustion	Residential	Wood	Fireplaces: Insert; non-EPA certified
2104008004	Stationary Source Fuel Combustion	Residential	Wood	Fireplaces: Insert; EPA certified; catalytic
2104008030	Stationary Source Fuel Combustion	Residential	Wood	Catalytic Woodstoves: General
2104008051	Stationary Source Fuel Combustion	Residential	Wood	Non-catalytic Woodstoves: Non-EPA certified
2104008053	Stationary Source Fuel Combustion	Residential	Wood	Non-catalytic Woodstoves: Pellet Fired
2104008060	#N/A	#N/A	#N/A	#N/A
2104011000	Stationary Source Fuel Combustion	Residential	Kerosene	Total: All Heater Types
2199006001	Stationary Source Fuel Combustion	Total Area Source Fuel Combustion	Natural Gas	All Boiler Types
